

# LockLabs

The AutoProPAD BASIC has the same transponder programming capabilities as the LITE, but with a simplified delivery method. The LITE has a Bluetooth VCI Box that connects to the vehicle's OBD port, which leaves you free to pace madly around the vehicle you're programming all while keeping the tablet in-hand. The BASIC has a hard-wired connection from the tablet to the OBD port (like the full) which means you'll have to hang out inside the vehicle while waiting for programming to complete. The BASIC comes with a standard OBD2 dongle.

For the most part, the BASIC is just about every bit as good as the LITE but nowhere near as comprehensive as the full, which does transponder key precoding and EEPROM reflashing. You'll get the same one full year of updates and technical support, as is standard with every AutoProPAD programmer. Keep in mind that no compromises in quality were made to achieve this lower price point. The BASIC enjoys the same rugged design you've come to expect from XTool USA. It has the same suite of OBD programming software as the LITE and shares the same update cycle as well as the same high level of technical support.

Box contents in no particular order: (1) AutoProPAD BASIC transponder programmer (1) serial port connector (1) OBD2 adapter (1) micro USB cable (1) AC to DC wall adapter (1) freedom port adapter (1) vastly inferior European power adapter (1) registration card
